

## ABSTRACT

This invention provides antigen substance inductors which produce highly selective and/or specific vaccine precursor, vaccine, antibody (including idiotype antibody), neutralizing antibody, antitoxin.

5 This invention is to produce and/or manufacture highly selective and/or  
specific vaccine precursor, vaccine, antibody (including idiotype antibody),  
neutralizing antibody, antitoxin by quantum thermodynamic and chemical control of  
molecular functions and morphogenesis, inducing non-functional complex  
macromolecules which form organism and/or non-organism and which become to be  
10 substance with fundamental structure more closed to an induction of the functions,  
utilizing the fundamental structure of molecule which is indicated in Formula 3-a as  
a representative molecule. Moreover, by those produced substances, this invention is  
to produce and/or manufacture antimicrobial agent, antiviral agent, neutralizing  
antibody, antitoxin, antitumor agent, anti-protozoa agent (malaria, spirochaeta et. al),  
15 molecular discriminating agent, antibody as labeled compounds, histocompatible  
accelerator on tissues or organs, immuno-response accelerator or immuno-response  
controller, complement chain reaction accelerator.

### Formula 3-a
